6AN8-A	RCA & Euro	1960's	N/A	28	Call	Again the orig. from the orig. and then tested on the orig. RCA WT100-A and you sure as HELL need to test these on a WT100-A as only about one in 3 is any damn good. Both the pentode & triode sections had grids so close to Cathode etc. that could not really be made well in the real world. (I.E.) Even crisp new in the box from the best production days were all over the place measurements & performance wise. If you want to roll the dice with a guy who has a service tester and no idea what the hell he is doing, have fun. But don't expect good consistent results from your equipment!
